

## **Clear Cache in Chrome**

Clearing your browser's cache and cookies every now and then can ensure your web browsing experience is smoother and faster.

While clearing your cache will sign you out of most websites, it can help web pages load faster, free up disk space, help applications run better, and maintain security by clearing any stored data, such as personal information.

 Open up Google Chrome and click on the three dots in the top right-hand corner of the window. In the dropdown menu, click on Settings to open up Chrome's Settings

2. Select **Privacy and security** on the left-hand side or search for "cache" in the Search settings bar
